MSA V2 Setup Instructions

1. [Follow this tutorial](#) up to "Enable Packet Forwarding" (Meaning can stop once you get there). This will help you setup the wi-fi access point. Remember the password if you change it has to be 8 characters or more
2. Watch from 0:00 to 3:30 of [this video](#) (it'll help you install flask).
3. Then download the MSA folder I uploaded to [github here](#). Place that folder on your desktop.

Actually running the thing after setup

1. Connect to your RPi's wifi access point
2. Start the "mywebserver.py" python script to start the server (we'll configure this to work on startup)
3. Get the IP address of your RPi
4. Plug that IP address into your url box of your laptop
5. Have fun!
